5. Результаты выполнения тестов:

Все фигуры из тестовых файлов успешно загружены и нарисованы правильно

6. Объяснение результатов работы программы:

- 1) Создаётся чёрный экран "Холст"
- 2) Программа выполняет определённые действия в зависимости от нажатой кнопки:
 - A) "New canvas" стирает все фигуры;
 - B) "Save\Open" Сохраняет координаты вершин фигур в файл или создаёт фигуры по координатам из файла;
 - С) "RGB" Изменение цвета линий для следующей нарисованной фигуры;
 - D) "Triangle/Square/Rectangle/Trapezoid/Poly-Line/Polygon/Circle" Создаёт фигуру (Треугольник(базовое было дано вместе с GUI, Квадрат, Прямоугольник, Трапецию, Случайный Многоугольник, Ломаную Линию, Круг)), рисует её и добавляет её в вектор
 - E) "Remove" Удаление фигуры по индексу
 - F) "Undo" Отменяет последнее совершенное действие (Добавление или Удаление фигуры)
- **7. Вывод:** 1) Ознакомились с проектированием и структурами классов в C++.и усвоили навык работы с ними; 2) Написана программа, производящая операции на графическом интерфейсе.
